Re: Kiln Stack External Testing – SRF Test Programme

Dear Mr Ó Seasnáin,

As part of the approved SRF Test Programme, condition 10 states that three rounds of external testing are to be carried out on the kiln stack during the programme. The purpose of this testing is to demonstrate compliance with IE Licence P0029-06 emission limit values (ELV's). The first round of testing was carried out in July from the 18th to 20th by Element Materials Technology. As part of this return, please find included a report from Element Materials Technology which presents the emissions recorded from the kiln stack A2-01 from the 18th July to the 20th July 2023. All results are compliant with licence ELV's.

The following graph shows the hourly rate of SRF usage during the three days on which the stack testing was taking place. Due to the commercially sensitive nature of the volume of SRF used, this has been reported in terms of the SRF monthly targets which were agreed by the EPA as part of the test programme.

Should you require any further information, please don't hesitate in contacting me.

Yours Sincerely,

Eve Howard
