RE: Storm Water Discharge Point M/257/S

Dear John

We recently replaced kerbing along the Eastern boundary of the site. During the works a storm water discharge point was installed to prevent the accumulation of storm water in the area. The point has been designated as M/257/S. Refer to attached storm water drawing.

The storm water is released directly to a surface water drain. This point will be monitored as per Appendix C.2.3 of the licence. The trigger limits for storm water emissions have been established as per condition 6.15.2. A bung has been fitted on the discharge point, which can be closed in the event of the trigger limit being met or exceeded. Any water accumulating in the area, as a result of closing the bung, will be pumped back to the wastewater treatment plant.

Yours sincerely

Niamh Murray
